## LATEST NEWS:

### Latest MEMNET Users

**Over the first few months of 2011 we have new clients live on MEMNET. We are happy to welcome:**

[The Australasian Corrosion Association](#)

[The Massage Association of Australia](#)

[The Perioperative Nurses Association of Queensland](#)

and

[The Victorian Transport Association](#)

NAQ would like to welcome its new clients, we are pleased to be able to provide a business solution for them and we look forward to continuing a long and mutually beneficial relationship.

### Secure Hosting

We at NAQ are happy to announce that we have achieved a major milestone in the security of our hosting facilities.

In March 2011 we received recognition of PCI DSS compliance which is a security standard being implemented across the world for the safekeeping of financial information.

You can rest assured that NAQ is providing industry best practice in the security of your databases.

### Version 2.5.3 Released!

We have continued to enhance the MEMNET product and to provide those enhancements regularly during the first three months of 2011.

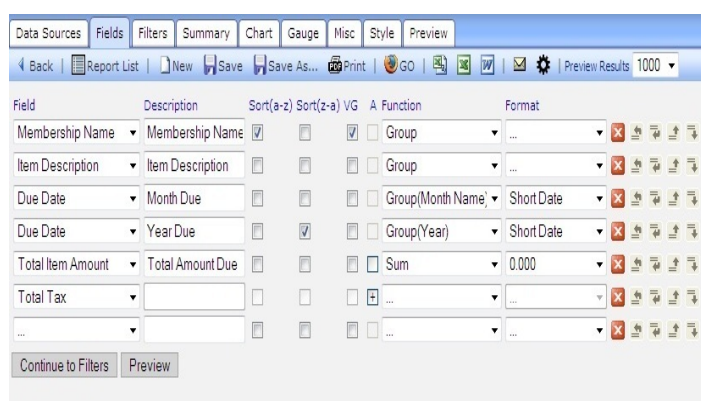

Enhancements provided over the last three months include:

- **Continued Professional Development Recording**  
MEMNET now provides the ability to record CPD/CPE records against a person. These records can be entered manually to supplement those automatically created from the Events and Training module. All data is available in ReportMaster providing you with the ability to report and analyse these records appropriate to your needs.
- **Extended Member self service facilities**  
A major overhaul of the member self service module was undertaken to ensure that access to the membership data is secure. All database facilities accessible by your members operate under a secure (SSL) site, but in addition we have encrypted the links and ensured that it can only be accessed from links within your own web site.  
  
The Member self service Account Balance enquiry now provides your Members with the ability to re-print an invoice.
- **Subscription Renewal on Payment**  
MEMNET now provides a single screen that will update all the relevant information for subscription payments you receive before you have sent the renewal invoice. The invoice screen will now generate the invoice, record the payment and roll forward the subscribed until date.

## Spotlight on: ReportMaster

MEMNET as standard is able to produce CSV extracts on demands allowing you to analyse your data in a spreadsheet, a format familiar to all users.

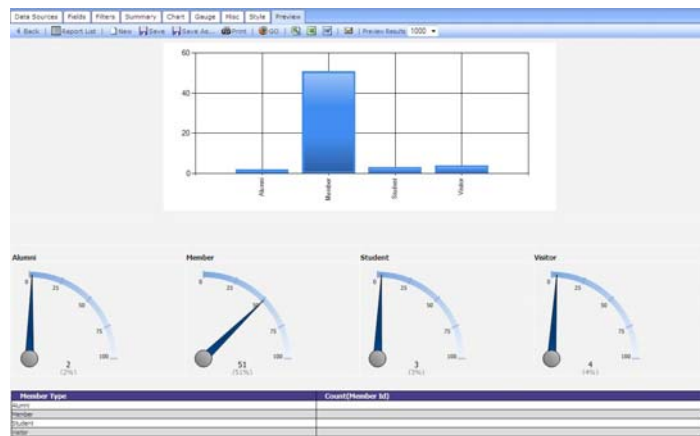

However, we are also able to offer Report Master. Providing extensive reporting capabilities, this additional MEMNET module allows powerful Ad-Hoc Reporting. It can produce reports in numerous printed and data formats as well as enabling automatic generation and emailing of reports to internal staff and external recipients.

You require no understanding of programming languages because ReportMaster reports are generated by answering prompts and selecting from menu options.

Report Master uses easy to understand English terminology which allows users to quickly locate the required data they wish to report on. Report Master also supports formulas, functions, formatting, visual grouping and subtotals. You can then use this information to dynamically produce graphical representations of reports such as pie, plot and bar graphs as well as radial and linear gauges.

Report Master also allows you to save reports and schedule them to automatically be sent via email. Reports are produced in an easy to read format, allowing quick & efficient location of figures. Reports can be output to PDF or Microsoft Excel for easy distribution and Hyperlinks to reports can be distributed within the network allowing users to run them in real-time.
