Release Notes

MEMNET v2.5 Upgrade

Wednesday 5th January 2011

Events

Over the last few months we have been restructuring the Events module and we have introduced a number of features that will ensure greater management of your Events.

Events now includes;

- Multiple registration types,
- Multiple options per registration type,
- Table plan allocation and management
- Badges, certificates and labels

Variable Subscriptions

To help reduce the number of subscription codes needed to be maintained we have added the option to define variable price subscriptions. For each subscription you will have an option to set if the price is variable. For variable price subscriptions, when creating/editing a membership subscription, you can alter the amount and tax per member as well as the description that will be printed on the invoice/reminder. This allows you to have 'negotiated' prices without having to have another subscription code.

We have also provided a fast entry price amendment facility to allow you to update all prices individually or by an amount/percentage.

Variable Automated Member Code Length

If you have a requirement for a short or long member number you now have the ability to change the length of the member numbers that are automatically produced by the system. The variable member length is maintained in the company settings in administration. For existing clients who wish to reduce the lengths of their automated Member Codes please contact us.

Add custom fields to people

If you have additional people on members you now have the ability to add custom fields to people. The custom fields are maintained alongside the custom fields for member, organisation and event.

Member quick search

We have added Member quick search to the left hand side navigation of MEMNET above the quick links section. This will enable you faster access to a Member record by either entering the member code or membership name without needing to use the search functionality. If it matches on one member only it will bypass the search results list.

Member / Person display

We have added a free format job title and specific field to record the member's website. Also we have reorganized the Member profile to show the Street Address. Special characters (+ , ext ...) can also be added into phone numbers as well as being able to record 'Business Direct' and 'Toll Free'.

Subscriptions can now be deleted form Subscription History

To allow for greater control of your members subscriptions we have added the ability to delete subscriptions from your member's subscription history.

Quicklinks

We have now extended the amount of quick links to 10 of the last of each members, organizations and events. Quick links are located underneath the member quick search of the left hand side navigation of MEMNET.

Filter your Contact records by Category

We have added the ability to be able to filter Contact records by Category. You can setup your own contact categories inside the Type Administration section of the System configuration section. When you create a contact record you will be able to add a category, which is located underneath the contact status.

Security Warning that comes up on certain browsers

We have resolved an issue that was displaying a standard browser security warning each time you moved around MEMNET which was affecting certain browsers.
